

Underwriting test rules

TAP sample file | Fictional product rules for prototype testing

Validate the decision boundary

Use these rules to exercise the application form, review queue and audit trail. They describe a fictional workflow for the TAP demonstration.

Rule	Scenario	Expected behavior
UW-01	Missing health disclosure	Block submission and focus the unanswered question.
UW-02	Answer changed after review	Invalidate the old decision and request another review.
UW-03	Duplicate application	Keep one application and show the existing reference.

Evidence to retain

Record the application reference, changed answers, previous decision and new review event. Verify that a failed submission does not create a policy.
